Tom's Admin Access

Easter Egg Implementation Guide

Overview

The "Tom Needs" feature provides full administrative access to Project Phoenix through a simple trigger phrase. This easter egg gives Tom complete visibility into all project components, code, deployment, and documentation.

How to Use

Trigger: Type "tom needs" (any capitalization) in ANY station
Response: Time-aware greeting + context-specific information
Reset: Closes when modal is closed (session-based)

Available Commands

Command	Response
tom needs git	Git repository, commands, auto-deploy info
tom needs tech stack	Complete technical architecture
tom needs agents	All 8 agents with ELCA values
tom needs compliance	ELCA compliance framework
tom needs credentials	API keys location (secure)
tom needs demo script	15-minute presentation flow
tom needs cost	Complete cost breakdown & scaling
tom needs urls	All live URLs and dashboards
tom needs code	Key file locations
tom needs [anything]	General project overview

Project Phoenix - Complete Access

Git Repository: https://github.com/sean-mcdonnell/Mothership
ELCA Demo: https://elca.mothership-ais.com
Landing Page: https://mothership-ais.com
API Endpoint: https://elca-mothership-api.onrender.com
Render Dashboard: https://dashboard.render.com
Vercel Dashboard: https://vercel.com/dashboard

Technical Implementation

Location: /elca_live_demo.py, lines 164-363
Trigger Detection: Case-insensitive "tom needs" in query
Time-Aware Greeting: Good morning/afternoon/evening/late night
Context Detection: Keyword matching for specific information
Response Format: Markdown with code blocks, lists, emphasis

Security Note

The system provides information about WHERE credentials are stored (Render environment variables) but never exposes actual API keys or secrets. All sensitive data remains secure in Render's encrypted environment variable storage.
